Yes.

Download the Network Installation, burn to CD and install this way:

\*\*\*PRINT THIS LIST\*\*\*

Do not use Express Installation.

You can order Service Pack 1 CD from:

<http://www.microsoft.com/windowsxp/pro/downloads/servicepacks/sp1/ordercd.asp>

Download the Network Installation from here: (be sure to select the correct language)

<http://www.microsoft.com/windowsxp/pro/downloads/servicepacks/sp1/>

Be sure to get the 32bit version. (Windows XP Home and Pro)

DSL takes about 20 minutes, if you do not have high speed access, get a friend to D/L SP1 for you.

Then burn it to a CD and keep for the future.

It is best to resolve current issues BEFORE installing SP1.

First check to make sure you have all updated drivers.

You should have at least 2gb free space (Less than half that is needed for SP1, but if you are that close, you need to start looking for ways to free space or add another hard drive.)

Check with computer manufacturer to insure compatibility with SP1, there are a few models where the company has said wait while the manufacturer implements a fix.

Compaq and HP are 2 that I know of.

If you have HP or Compaq computer contact them before installing SP1:

[http://www.hp.com/cposupport/personal\\_computing/support\\_doc/bph07866.html#P1\\_65](http://www.hp.com/cposupport/personal_computing/support_doc/bph07866.html#P1_65)

There may still be issues with the HP/Compaq fix, so you may want to wait

If possible run Ad-Aware and delete spyware:

<http://www.webattack.com/get/adaware.shtml>

Run chkdsk to check file system.

Perform Disk Cleanup (all boxes checked except Compress old files)

Perform Disk Defragmentation.

Ensure correct date and time.

Disconnect all peripherals (camera, scanner, printer etc)

When you are ready:  
Create a Restore Point in System Restore  
Go to MSCONFIG, make note of what is checked in Start-Up tab then  
uncheck all in Start-up tab.  
Reboot the computer  
Login as an Administrator, disable ALL unnecessary applications  
including antivirus.  
Do NOT touch any keys during the process unless necessary.  
Install SP1 by double clicking on it, follow the prompts.  
After SP1 install is completed, reboot, defrag.  
Go back to MSCONFIG and recheck what you unchecked.

```
