Hello,

I have a hard disk formatted with NTFS and with Windows XP installed that I put as Slave with another NTFS formatted hard disk and also running Windows XP as Master. When I try to go as administrator to certain folders of the Slave disk I get access denied. This folders belong to the administrator of the Slave hard disk.

Is there anyway that I can change the folders permissions?

Is there anyway that Windows XP prompt me to insert the username and password of the owner of the folders?

Or does exist a software that perform the task?

Thanks in advance

Cheers

Carlos Oliveira
