

microsoft.public.windowsxp.security_admin: I cannot see deleted files in the Recycle Bin, why?

I cannot see deleted files in the Recycle Bin, why?

When I delete files it goes in to my Recycle Bin. That is what is supposed to happen and it is obvious that it does that because the Recycle Bin icon on my desktop changes to a full Recycle Bin icon and secondly when I open the Recycle Bin I can select the options to Undo Delete of the file/Restore deleted files or to Empty the Recycle Bin. The problem is this, for some reason I cannot see any of the files that I have deleted (into the Recycle Bin) when I open the Recycle Bin folder, it is empty (visually) even though I know that I have files deleted and that they (the files) are supposed to be in there (I know this is true because of the reasons I mentioned in the intro). To make some clarifications one I do not have the option to "Do not move files to the Recycle Bin. Remove files immediately when deleted" enabled, two I know that I have enough space reserved for the Recycle bin (10% of the hard drive/3.72GB) and three I am not deleting hidden files. Does anyone know why this is happening and how I can fix the problem? Thanks. Aaron
