Create a shortcut in Administrative Tools with the following in the target field:

=====
%SystemRoot%\system32\secpol.msc /s

Put the following in the start in field:

=====
%HOMEDRIVE%%HOMEPATH%

The icon is located at the following location and it is the icon on top row left that shows a tower CPU with a padlock on it.

=====
%SystemRoot%\system32\wsecedit.dll

Name the shortcut "Local Security Policy". That should get your Local Policy Editor back where it should be.

Regards,
W.Search
