i am using wxp pro.

i am setting up user passworded accounts and 1 guest account on one machine. this i managed to do successfully. what i want to do next is to limit, restrict or preferably deny user and guest accounts access to one or more hard drives (not even to read). failing that, i want to deny user and guest accounts access to certain folders across different hard drives (not even to read). preferably straight denial, much less ideal would be to use password protect. all hard drives are internal fixed hdd's. i understand that currently each user can only access his or her own document folder in the c: drive. i want to go further so that only me as the administrator can access these other drives and folders within them while user and guest accounts could not. can this be done?

i also want to limit what application certain users can use and what application a guest can use. is this possible? if it is, how?

these are my search terms on the kb databases to no avail:

'restrict access to folders'

'restrict access to files'

'folder access'

'file access'

'restrict hard drives access'

'hard drive access'

'restrict access'

'limit access'

'denied access'

'restrict application launch'

'restrict program files'

'hard drives security'

microsoft.public.windowsxp.security_admin: how to restrict or deny hard drive(s) access for guest's/user's accounts

'folders security'

'access security'

'access user account'

'restrict user account'

these search terms did not shed any lights.

thank you in advance for any help and advice and pointers
on how achieve what i want to do.

tj
