I had a problem with my "windows xp" and sent it to the shop i got it from. they added a new hard drive (so there is now 2) and install xp on it. the computer all works now but when it was working befor I set one my folders to private, because it is on a difrent drive I can not open it, it just comes up with "You do not have promition to acces" and there is no option for entering a password. how do I access my files in that folder.

note: my hard drive is formated to "NTFS"
