I am reinstalling DirectX 9 for the second time now. I have noticed a compatibility issue with DirectX 9, Windows Messenger (note: not MSN Messenger), My Outlook Express kept trying to load up Windows Messenger even after Windows Messenger was uninstalled. I have just now ran the Registry fix for Outlook and Windows Messenger to tie both together. Windows Messenger also kept freezing ever 10 seconds or randomly due to the compatability issues with DirectX 9. I tried removing DirectX 9 with the uninstall DX9 bat file that one of the representatives here posted. It helped the Windows Messenger issues and got rid of some compatibility issues. But now certain games that require DirectX 9 will not work in Network play. My Inbuilt XP firewall would also crash when trying to work with settings. The way I had to fix these issues is simply remove the tie between Windows Messenger and Outlook Epress, then uninstalling Windows Messenger and Installing MSN Messenger 5.0 instead. Then I reinstalled DirectX 9, followed by a reboot solved all my problems. What I want to know, is when will these compatability issues be fixed between DirectX 9 and the XP Inbuilt Personal Firewall and Windows Messenger will be fixed?
