I had to re-install Windows XP and other programs on my Compaq Presario 2700 (2715US) recently. I did a backup of my Profile in the Documents and Settings folder of my Windows XP Professional Machine using the backup utility that comes with Windows XP. When I reinstalled and restored my profile and settings I am unable to decrypt my outlook.pst file. I have the full profile structure intact. I tried to add another user to the "Encryption Details for..." "Users who can transparently access this file:" listing but got another error message. Is there anyway for me to decrypt this file?
