Greetings --

A word of caution here: If you lack the basic knowledge to remember a password, to look in your motherboard's manual to learn how to reset the BIOS passwords, or that a PC's OS is completely irrelevant to it's BIOS, you are definitely, most emphatically, not knowledgeable enough to try overclocking. You stand a good chance of destroying your motherboard and/or CPU on your first attempt. I suggest you go back to studying, and learn quite a bit more about operating and maintaining PCs in general before you start experimenting.

Bruce Chambers

Help us help you:
