Well after trying many things I decided to remove quickbooks, disjoin the domain then redo it all and now it is working, one guess I have is who ever did this before did not install the apps as admin.

>-----Original Message-----

>If the only domain controller was replaced by not having
>two domain controllers temporarily, then you have
defined

>a new domain, even if it has the same old name.

>If there are no users when you examine the AD Users and
>Computers of the domain, then there are no domain user
>accounts (as when an old domain is trashed and then
rebuilt).

>In that case you need to redefine what is needed, and
likely

>should disjoin/rejoin the client machines.

>

>Have you tried defining a local user account that is a
local

>admin (other than the Administrator) to see if it can
run the

>Quickbooks app ? This narrows the issue, since any
admin

>(whether local account of via domain group membership in
>local Administrators) should be treated the same by a
well

>behaved app. And, BTW, Quickbooks is not a well-behaved

>app but rather seems to be one of those that believes
that

>taking a DOSish downlevel WinOS app and installing it
>in an uplevel Windows is all that should be needed on
the

>part of the app developers.
