Scandisk will not allow Windows to load

I have experienced an issue where if a scandisk is scheduled for the next boot, the PC will not reload windows. Ever! Everytime the system is booted, the scandisk utility is loaded. When completed, it just sits at the final confirmation window. Windows will never load in it's current configuration.

I was able to get it to work by selecting the last known good condition from the startup menu (pressing F8 on boot), but whenever I run scandisk, the same issue arises again. This is a big problem. Any advice!
