Microsoft Security Bulletin MS03-011 has a download that's supposed to fix a VM problem. The download number is 816093.

I have tried to download and apply this patch eight times over the two months since it was released. Every time I get a "No Updates Were Installed" error, but no clue as to why it failed. All other updates have been processed without trouble.

Any ideas as to why this one patch won't download? (Supposedly one can get free phone support for Security Bulletin problems, but after going through the Web page for over half an hour, I'm unable to locate a phone number to try. I hope this message board is an appropriate way to ask for help.)
