I spent part of today installing those updates that Microsoft recommends everytime you boot up. Now that I've done part of the upgrades, I'm getting error messages that their "Crash Analyzer" can't diagnose. Everything seems to be working all right, other than having to get through the Crash Analyzer and sending reports when I boot up, which is required with every upgrade. Has anyone experienced this? What did you do about it? Of course, I don't know how to speak to anyone at Microsoft directly, and I would pay money to do so, if it would fix this.
