Always check the Recycle Bin first.
If the file is there, right click the file then click Restore.

It is important not to do anything with the computer until a decision is made.
Every boot and even every keystroke potentially permanently destroys the data.

Some 3rd party tools such as Norton System Works have utilities like "Norton Protected Recycle Bin"
Check you documentation if you think you may have this capability.

Recover and Restore Deleted Files (Line 36, left column)
