I had to download SP-1 by itself. I also tried downloading the security patch by itself. Same error and same record in the update.log file.

Strange thing is I installed the security patch for RPC vulnerability 3 days ago and it is again brought up by Windows Update. Also, I thought I had installed SP-1 last year but the "Installation History" records that installation to be Failed. But, Windows Update did not bring up the SP-1 upgrade until now and even worse I am not able to update my system at all.
