Karen —

Apparently, your computer has an unwelcome visitor (VIRUS) known as the WM32 Blaster/Lovsan WORM.

It entered the computer through your internet connection because the "firewall" was not properly enabled and essential critical updates were not installed from the Windows Update website. For instructions on fixing the problem, visit:

What You Should Know About the Blaster Worm

<http://www.microsoft.com/security/incident/blast.asp>

Remove W32.MSBlast.Worm

http://www.kellys-korner-xp.com/xp_qr.htm#rpc

Blaster Worm: Critical Security Patch for Windows XP (32-bit version)

<http://microsoft.com/downloads/details.aspx?FamilyId=2354406C-C5B6-44AC-9532-3DE40F69C074&displaylang>

If your computer is constantly attempting to shutdown or reboot, quickly go to:

Start > Run and type: CMD , and hit enter.
This opens the Command Prompt window.

Then type: shutdown -a , and hit enter.

This should halt the rebooting problem.

Then immediately turn-on Windows XP's built-in Firewall:

How do I turn on the Firewall?
