I have XPpro. Just yesterday I reinstalled Windows and now I don't seem to have access to something that was there before. I can right-click on a folder to share it, but I no longer have access to the permission setting where I can set r-w-e priveledges. When I right-click on the folder and choose 'Properties' I see only 'General' and 'Sharing' tabs, where I used to also have 'Security' and 'Web Sharing'. Is there some global setting I haven't turned on or something? Please help, this is driving me nuts.
