Shane,

>From what you are describing, I would guess that you have "On resume, display welcome screen" checked.

Open your Display Properties window (right click anywhere on your Desktop and select properties). Select the Screen Saver tab and within the Screen saver section you should see a check box with "On resume, display welcome screen" after it. Uncheck this box and you will no longer get the welcome screen when you computer goes idle.

Follow these instructions to disable the welcome screen when you first boot up.

Type "control userpasswords2" in the Run command. A User Accounts window will open. Above a list of Users for this computer: you will see, "Users must enter a user name and password to use this computer." Uncheck this box and restart your computer.
