Set up 25 new Xp pro machines with local and domain username and password the same. Shared printers and everything was fine. Another admin changed local username to "admin" and changed the passwords. Now, even logging into domain, can't brower any other machines to get to sharded printers? Get message "//name is not accesible. You might not have permission to use this network resource. Contact the administrator of this server to find out if you have access permissions. The network path was not found' Any ideas?
