it is mshome, it isnt ms itself. it is some hacker that has taken over several computers mine included. look at my posts for help. my computer is listed as mshome and it puts up anonymous as a return address just like you have. Im not sure if that is part of what the system is doing, but I do know there is a very big problem that Microsoft techs refuse to admit is there. I have been on the phone with them since oct 15 and they keep telling me my system is fine. it isnt and posts like your post and my log files prove it.

You might have to send the system back to dell to have them check it. I hope someone sees what is going on soon. Im getting tired of running around the same circles time after time.

I bought all brand new equipt and brand new oem microsoft xp home edition full install cd. somehow someone loaded in something that changed my computer into a windows NT server – lanman server with lanman workstation. I always get this log that claims it is checking with "france" for a fix or a fix came back from "france"

Someone found a loophole and is compromising a lot of systems. Microsoft refuses to go further into checking this out and I am stuck with a computer that is no longer controlled by me. some of you might say, just go buy a new clean computer, why? so this can happen again? next answer, Im a disabled american. this can be fixed and now I have stopped trying to protect the general community with microsofts blessing and encouragement that all is fine. not only them, but the people I bought the hardware from insist all is fine – no problems found. If someone knows a cure or can help me fix this. Post to one of my help posts please, leave your email and also email me at my email address of vinteks@yahoo.com, I do not check that email from this computer and only go elsewhere to

check it. Nothing on this computer has the real info about me that I know of. I will not use and have not used my real email account since building this system. I will not arrange any open access to anyone in forum, only through email. I am willing to open my computer up to allow someone else to fix the problem if they think they can. I have tried and I cant fix it and microsoft tech dept is not willing to even look to see if a problem actually exists.

Im sorry for the ranting, Im just tired and feel very alone in this problem and how to fix it. I hope you are not infected and I hope dell can and will help you with the problem. Dell seems to be better with security issues than most others.
