i am on another computer now because my other computer
wont load... here is what it says when it tries to load
up:

```
STOP: c0000218 {registry file failure}
the registry cannot load the hive (file)
\systemroot\system32\config\SECURITY
or its log or alternative
it is currupt, absent, or not writable
```

beginning dump of physical memory
dump complete

please contact your system administrator

what do i have to do to fix this, the thing will hardly
turn on BUT i have installed WINXP again at a different
location and can access the files...

please can you help...
