I am unable to schedule a backup. I have scheduled it thru the task scheduler and also the backup wizard, and then if you start the wizard to do a manual backup, theres a tab you can go through to schedule more. I schedule one to run daily at 2 AM but it just doesn't happen. I am able to run it manually (meaning I just set up the selected files and folders in the wizard and push the 'backup' button), but it won't run when I schedule it for a future time. Also, why is there an option to schedule a backup at different times (daily, weekly, monthly etc...), but there is also (on the advanced tab) a 'repeat option'. What's the difference and which should I use? Whoever designed this thing didn't do enuff homework. It isn't very intuitive.

Thanx for any help,

Rip
