Try System Restore to a date/time before issue started:
Start/All Programs/Accessories/System Tools/System Restore.

Otherwise perform a Repair Installation:

Repair Installation:

http://www.dougknox.com/xp/tips/xp_repair_install.htm

Windows Updates will need to be reinstalled.

Data should be safe, back-up important data just in case.

Install Service Pack first and by itself.

Then install ALL Critical Updates no more than 4 at a time,

Disconnect the network/modem cable before starting repair and do NOT
reconnect the cable until repair is completed and firewall is
installed/enabled.

<http://support.microsoft.com/?kbid=283673>

Be sure you completed ALL steps on the link to get rid of Blaster.

To prevent this in the future, follow this link:

<http://www3.telus.net/dandemar/Security.htm>
