If this is setup as folder and all subfolders the following permissions:
Administrator-Full -control

Everyone-Read & Execute
-List Folder Contents
-Read
-Write

And set the shared permissions as everyone full-control. Users can read write and execute but will not be able to delete.

This should work as you need it to.

----- anonymous@discussions.microsoft.com wrote: -----

I have done this also and still am getting the same results. In some cases it tells the user that the folder is read-only, though when I check the folder, it is not marked as such.

>-----Original Message-----

>If you do not have Delete permission or Delete Subfolders and files on a file or folder, you can delete it if you are granted Delete Subfolders and Files permissions on the parent folder.

>>Try not setting it to deny, both Delete Subfolders and Files and Delete permissions, and just leave it unchecked. This needs to be done from the parent folder down. This should allow users to still create folders and files but not delete them.
