Steve;

Empty your temp folder.

Start | Run | Type: cleanmgr | OK |  
OK | Yes

Or

Start | Run | Type: %TEMP% | OK |  
Find: tnotyoc | Delete

=====  
To display hidden files and folders

[[Open Folder Options in Control Panel.

Click Start, point to Settings, and then click Control Panel.

Double-click Folder Options

On the View tab, under Hidden files and folders, click Show hidden files and folders.

Notes

Hidden files and folders will appear dimmed to indicate they are not typical items. Usually, hidden files are program or system files that should not be deleted or changed. To display other hidden files, clear the Hide protected operating system files (Recommended) check box.

If you know the name of a hidden file or folder, you can search for it. <<=====

If you want to see all file name extensions, clear the Hide file extensions for known file types check box.]] <<=====

=====  
Is it C:\WINDOWS\System32:tnotyoc.dll

Or

C:\WINDOWS\System32\tnotyoc.dll ??

--

Hope this helps. Let us know.

Wes
