He probably set the Administrator password.  
Reboot to Safe Mode:  
Reboot tapping F8 each second.  
Select Safe Mode at the menu.  
Select Administrator or other account you have access.  
Go to User Accounts in Control Panel.  
Select Administrator and either Set or Change password as appropriate.  
Also change/set passwords to ALL other accounts available.  
Reboot back to Normal Mode.  
Go to User Accounts again.  
Similarly set password/change password on all other accounts that have Administrator access.
