I recently downloaded all of the critical updates for Widows XP. Since then, immediatly after entering my username and password, I get the error message:

Windows cannot load the users profile but has logged you on with the default profile.

The message then goes on to say something about the registry but disappears before I can finish reading the entire thing.

How can I correct this?

Also, if I attemp to go to Manage from My Computer, via the right mouse click, I get another error message that reads:

Snap-in failed to initialize.

Name: Computer Management

CLSID: {58221C67-EA27-11CF-ADCF-00AA00A80033}

HELP!!!!!!!!!!!!!!
