Thankyou for your cryptic response to my query, but, you
have totally missed the point. As this is (as I
understood) a forum where one can discuss/seek answers to
questions from those, whom willingly give up their time
and knowledge to educate us mere mortals, who struggle
with concepts et all computers.

As this forum specifically discussed security issues you
missed the opportunity to discover that this particular
problem I was encountering was in fact a new type of
virus. I have since discovered on a Goggle search other
users having the same problem. It is also on that
particular site I found helpful comments on how to
address the problem at large.

I notice the you have MVP before you name and I have no
doubt the diligence and effort you have put into gaining
the knowledge enabling you this display this badge of
excellence.

Finally, if your going to give your valuable time and knowledge, make the reply relevant, rather than a cryptic response to an already floundering fellow computer user who has not gained anything from the experience of posting a query on this forum.
