I am using WinXP, & I tried to put this thing on my computer. I didn't have SP1 on my computer before then, due to the fact that I have had to reinstall XP 25 times over the past month, due to virus's that I constantly am contracting because I didn't have SP1 installed.

I tried to install this sp1 update from the security CD, & received an erroro msg about the sp1 file being corrupt. Any way around this? Anyone else had this problem?
