Hi Doug,

I have a retail copy of XP. How can I upgrade if I already have xp pro installed?

What should I do?

Thanks!

Gerry

Do you have a retail copy of XP? Or did your computer come with XP preinstalled? If the latter, then what you have is probably a recovery CD, and you won't be able to do an upgrade installation from it.

In some cases, you can look for a folder called I386 on your hard disk. Once found, locate the WINNT32.EXE file and double click it. This is the Windows setup executable.

If none of the above applies to you, you may need to bite the bullet, backup what you cannot afford to lose and reinstall from scratch.
