I am having a very strange problem. I cant change my local admin password, i cant chage my local password policies, but i can change other policies.

This started after i changed my admin password, when i try to reset the password after that.. its showing u cant change ur password at this time. the admin password reset in user accounts is disabled.

can somebody here can give some light into what has happened, there is no problem for me to add a new user and put him as admin, but the problem still remains like i cant change the password after that.. i can login into the machine.. its like everything else is working quiet fine.. except for this problem..
