The settings of "My Computer / Properties / Automatic Updates" are probably set to "Download updates and notify me when they are ready to be installed". Login as user with local admin privileges and wait a few moments. The icon in the task bar 's notification area should inform you that your updates are ready to be installed. Click on the icon and choose install. If you want to automate this task, you can chose option "Automatically download updates and install them on the schedule that I specify". This option is also on "My Computer / Properties / Automatic Updates".
