I have created a basic HTML webpage using Macromedia Dreamweaver MX 6 that includes some simple javascript and everytime I attempt to view it, Internet Explorer displays the following warning in the Information Bar:

"To help protect your security, Internet Explorer has restricted this file from showing active content that could access your computer."

In order to proceed I have to click the Information Bar, and then click 'Allow Blocked Content'. Then a Security Warning dialog box appears where I must click 'Yes' to allow my file to run active content. How do I disable this warning so that I will not have to pursue this series of steps everytime I happen to edit and preview my webpage?
