After the install you have to run through the mini-setup wizard as the administrator user (or the user that did the install). If not a piece of the application doesn't fully install and crashes when you try to run the app. I had the same problem.

Subject: Microsoft AntiSpyware1.0.614

I just loaded the newest version of the beta. I installed it as the administrator. It does not start when I log on as Fred (a member of the administrators group). I get a dialog box that says – Unexpected error;

quitting. Then a second dialog box: Error Loading Microsoft AntiSpyware–

warning:Microsoft

Windows AntiSpyware has encounter a critical error (error 101.) Please restart Windows AntiSpyware and run the program again. If you continue to

experience this problem, please unistall the program and install the most

recent version of Windows AntiSpyware. You can use Add or Remove Programs in

Control Panel to unistall this version of Windows AntiSpyware.

I did that but come up with the same results.

Thank you,

Fred Jacobowitz

Sorry about the double post. I think this is a more appropriate area.
