I installed Certificate Services in Enterprise CA mode on a domain member server. Later, without making changes or issuing any certificates, I decided to remove the installation and adopt a two tier method with an offline CA. I've built and configured my offline CA and am preparing to build the Enterprise CA again. I've noticed in Sites and Services under the Services node and AIA container, that there are entries there with the name of my old Enterprise CA server.

Can I safely remove these entries? Is there a method to clean up active directory after a CA has been removed?
