I am trying to update my MDAC to 2.8. I am able to extract the files up to a prompt that states "Digital Signature Not Found". The package name is "Exception Package". If you select OK at this screen an Advanced INF Installer error is returned. INF Install Failure. Reason: A certificate chain processed correctly, but terminated in a root certificate which is not trusted by the trust provider.

I have goggled for this error and only found one other entry and there was not reply. I check MSDN and Microsoft for resolution, no help. I also attempted to log in as Admin, disable the anti virus and looked for updates that I may not of had already. Nothing helped.

Please advise if any one out there has any resolution to this problem.

Thanks,

Jess
