This came up just recently in microsoft.public.windows.server.scripting, Message-ID: <1nlhe1hr5llh3p5icq7deugp83lfvj010o@4ax.com>.

See: <<http://www.gbordier.com/gbtools/fileacl.htm>>. FileACL has a /BATCH or /BATCHREAL option which produces a batch file for restoration. The latest version (2.9.0.1) has a COM interface for scripting.
