You certainly haven't provided much information. However, it would seem that your computer is not virus/malware-free. Run either Sysclean (first link below) or Dave Lipman's Multi-AV (second link below).

[http://www.elephantboycomputers.com/page2.html#Removing\\_Malware](http://www.elephantboycomputers.com/page2.html#Removing_Malware)  
<http://www.ik-cs.com/multi-av.htm> – Dave Lipman's Multi-AV

After you've done your initial scan with whatever first-line av tool you choose, update your full-featured antivirus (or if you don't have one get one) and do a thorough scan with it in Safe Mode. Then continue your cleaning by going through non-viral malware removal steps per the first link above.
