Hi,

I have a Win2003 AD with XP pro clients all working nicely together. Recently we merged with another company who also have XP pro clients & Win2000 AD setup, but I am noticing that several things are not working correctly. On all machines I cannot change the machine name & even after enabling the default share C\$ cannot access the machines drives. I have even enabled remote desktop but again cannot access that & to cap it all off cannot even ping them even though they are on the LAN and can use all LAN apps.

Am I missing something here?

Thanx for your time

G

.
