Thanks again everyone for all your help.
I reckon it's a cool thing to include in your software but for idiots like me it confuses me, thanks for putting my mind at rest.

hi you have got the correct version of spybot downloaded. be sure to run it regularly to keep your system clean. Just for the record I don't know why that about the most beautiful girl...however I think it may be to make sure you read it. after all it is a free program so they can put whatever they want into it. it is and excellent program to have.

Thanks both of you for your replies to my post. However I have one more question
I have downloaded spybot now, but have some concerns. On the help pages, under FAQ there is a question there that seems odd to me. I am wondering if I have got a bogus version after all. Could you have a look in your help facility of spybot. Under FAQ the 9th question is Who is the Most Wonderful Girl On Earth? I find that a bizarre thing to have in there and the answer too .

Who is the most wonderful girl on earth?
FAQ #029

Many people have guessed that she is my girlfriend. To my own bad luck, that is not true. But while she does not return my feelings of love, we still share a really wonderful and great friendship, and I am very very proud and lucky and thankful to be allowed to call her a friend. A friend who is warmer, more kindly, more forgiving, a friend to whom I feel closer to than any other. Even as "only" a friend (where "only" is quite the wrong word), Sandra Klass earns the title Most Wonderful Girl On Earth more than any

RE: help with anti spyware installation

other

person on this planet. Dear Sandra, I love you, and your friendship means all the world to me!

Surely this would not be in a professional bit of software? Is it in yours and if not what should I do?

Your help would be appreciated.

Thanks

Hi, yes pepi is correct for spybot, and yes all of them work fine together i have adaware, spybot, defender beta 2, and nortons running. and all are running in sync just fine....just a note there is not any 1 product on the market that removes everything. you just have to be careful to keep everything in sync. you can get away with having more than 1 spyware cleaner but you can only have 1 firewall and virus protection...as I say choose wisely..I also recommend using pop up blockers I am using 2 of them I am using nortons and msn explorer blocker...also have windows but i keep it disabled. as it clashes with the other 2. Hope this info helps....note only use what your system resourses will allow you as i have many programs installed ..I also have large hd and 2gigs memory so you dont want to overload your system either.

Hello

I am a fairly novice user but have been protecting my computer for some time now with lavasoft adaware. However I have recently found out that I still may have spyware not removed by that (although

RE: help with anti spyware installation

it deletes things on every scan).
I have been told to install spybot s&d. I am a bit paranoid about installing things , if I am unsure if they are genuine, as I know there are copycat programs out there. I want to know the genuine publisher of spybot search and destroy. Can anyone tell me if it is PepiMK ?

Also if I download spybot and run adaware, do I also need to install windows defender which I have just found out about. Don't they all do the same thing and will they stop each other working. Please, any help would be appreciated and please keep your answers relatively simple as I am not a technical person.
Many thanks in advance
