When I did a windows upgrade search the kb911927 came up as a "critical uograde". However this upgrade applies to windows 2000 (not windows xp home edition which is what I have). Why is "windows upgrade" recommending a critical upgrade for an operating system that is not on my computer?

--

Al Capone

Where are you seeing that this update is not for Win XP HE?
That update was installed on my XP HE system on 2/14.

Both of these Microsoft articles list XP Home Edition.

MS06-008: Vulnerability in WebClient could allow remote code execution
