I'm using Windows XP Professional. After downloading the McAfee VirusScan software I'm told I have a virus located in file path WINDOWS\SYSTEM32 file wininet.dll and the virus name is W32/Alemod.f.dll. The VirusScan program can't clean, quarantine or delete it. What do I do? It asks if it's "right protected" but I don't see anything that tells me. Help

Run McCrappy in safe mode and see if can clean it then.
