This only applies to Win 9x systems. There isn't an equivalent for XP systems.

I have been hunting for a way to limit our user's access to change Computer Names/Domains. In our organization every user has Administrator priviledges on their localized machine, which is required for our business, but we would like to limit their ability to remove themselves from the domain or change the computer name.

I found information on the Web stating that creating the Registry Key below will prevent the Network ID Page from being displayed, but it does not function as stated when applied to a Windows XP Professional Service Pack 2. I've rebooted a few times and I still have access to the Network ID Page.

Below is the registry key I found out on the web, but everywhere I have seen seems to imply that this is applicable on older Windows versions and doesn't state if there is an equivalent for XP SP2.

```
HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Policies\Network  
"NoNetSetupIDPage"=dword:00000001"
```

Re: Preventing access to Network ID Page (Preventing Admins from Changing Named/Removing from Domain)

Can anyone offer any assistance?
