Oh well, when I went to the Microsoft download page it was quite explicit in saying for Windows Server 2003 R2 and nothing about being compatible with XP.

Not true, the 2003 R2 CDs come with Administrative tools for XP.

Besides the same problem occurs if you enable the firewall on 2003.

That snap-in is not for XP.

I have installed the new Print Management snap-in on windows xp sp2 and I can not display a list of printers on my 2003 print servers without disabling the firewall on xp. The drivers, forms and ports all display with no problems.

2003 Servers do not have the firewall enabled.

File and print sharing is open in the xp firewall on all of my subnets and there are no issues with actual printing and sharing.

Re: New Print Management Snap-in will not work with firewall

I change the firewall settings to allow Any Network
(including
internet)
on
tcp ports 139 or 445 under file and print sharing and it works.

So why does it not work when I restrict it to my subnets? I
would
like
to
keep the ports restricted to my subnets.

Thanks for the help.
