Howdy!

IKE wrote:

> i have a win xp pro sp1 system at work. i have admin rights to the local machine but not to the domain. i have a user that logs into the system using a domain account. i have a program that i have to install as the administrator. the program will only run if you are an administrator. the domain user cannot run this program. the program runs from two different directories on the local hard drive. hou do i give this domain user access to this program??? thanks

You could try to monitor the file and registry access the program tries to gain. There are a few tools out there, I always name "filemon" and "regmon" from sysinternals.com (both freeware). Anyway, after you monitored the files and registry keys the program needs access to, you need to give the users access to them.

cheers,

Florian
