What is the full STOP error message? It looks something like this:

STOP 0x000000D1, (0x0000002b, 0x00000002, 0x00000000, 0xEEEE1b01)  
IRQL\_NOT\_LESS\_OR\_EQUAL Kbdclass.sys.

So I did that last little tid-bit and now my computer will boot up, show the WinXP loading page then go to the 'Stop' blue screen, I can't even use the computer anymore ! I had to respond from work. Please help me get the computer back up.

"Doug Knox MS-MVP" wrote:

Between the BIOS post screen and XP actually starting to load press F8.  
When you get the boot menu choose the Safe Mode option.

Alternatively, boot Windows normally, click Start, Run and enter MSCONFIG Go to the BOOT.INI tab. Check the option for /SAFEBOOT and apply the changes. Reboot. The computer will come up in Safe Mode automatically. When you're finished, run MSCONFIG again and uncheck the option.

Bruce, I'm doing things step by step and I'm getting "The  
Blue Screen of  
Death" with this message: IRQL\_NOT\_LESS\_OR\_EQUAL.  
Man, I really hope this is  
possible.

A'right, so apparently I don't  
know how to start up  
Windows XP Home in safe  
mode. I tried F12 and it  
gave me seven choices: 1)  
Normal 2) Primary Master  
Drive 3) Hard Disk Drive C  
4) IDE CD-ROM Device 5)  
System Setup 6) IDE Drive  
Diagnosis 7) Boot to Utility  
Partition....

Press <F8> as soon as the boot sequence  
starts.
