nass:

I've checked those settings & found it set to Medium with both boxes ticked. But...

I had turned off the Security Center option that comes with SP 2, when I got sick of false warnings and it didn't seem to do anything really worthwhile.

When I was trawling 'thru tweaks & settings to see what controlled the Info bar I turned Security Center back on.

I THINK this may have been involved in resetting the info bar behavior, but of course I can't now recreate the behavior and it's further complicated by my also using Google's pop-up blocker, my constant tweaking, my essentially flighty nature and inability to remember what I've done, exactly, five minutes after I've done it.

Oh well, keep on keeping on...

Thanks for your reply, which lets me know where to find this again. If I remember.

I've just noticed that I no longer see the Security Info bar –that was added by SP 2 I believe—at the top of IE anymore.

I've no idea how long this has been going on, nor what I did to change

Re: Browser Security Information Bar

this
behavior.

Can anyone give me the lowdown on this & what I need to check\do to
re-initial it.

Thank you

yours

Hi Trick,

Go to the IE Properties and Click on the Privacy Tab, click on Pop Up
Blocker Settings Button in the Bottom of the Privacy Tab Winow.

In the POP Up Blocker Settings window you will see a header Titled
Ontofications and Filter Level:

Play a sound when pop up blocked

Show Information Bar when a POP Up is Blocked

I have both Ticked (Checked), and while you there be sure of the POP Up
Blocker set to the desired Settings (I.e Medium).

Hope this helps

please write back here with your Findings
