Sounds like you made some good progress. If you used the File and Settings Transfer Wizard you can delete the file it created that you used to the transfer from one profile to another. Other than that most likely the space taken up is files in your My Documents folder which you may not want to have in both profiles and if that is the case delete those files from the My Documents folder that you don't need to be redundant after you make sure that you can access them fine in the profile you want to use them in. You can check the subfolders under your user profile to find out the size of each folder using Windows Explorer.

Steven:

Again, thanks for your suggestions. I did have to copy the shortcuts specifically from one profile to the other, and I also used the Transfer Files and Settings Wizard. I assume that the Wizard for the most part does the same thing as copying the profile in from the users menu? Anyway, this time using the Wizard it seemed to work. I compared the desktop and programs, and about 98-99% was transferred with these methods.

I did however, eat up about 2 gig of hard drive space to accomplish this. Oh well.

Best regards,

John
