Here are the results.

Firstly, Yes I did have two versions of Java. Version 1.4.2\_07 and v5 update 6.  
I eliminated 1.4.2\_07 and updated to version 5 update 8 as per advice.  
I installed and ran super anti-spyware and found several tracking cookies and worm.Svxhost/32 which were deleted. I then followed your multi\_av.exe instructions and ran (in safe mode) all the tests. Sophos and Trend micro came up clean but Kaspersky found amongst other things "trojan downloader.BAT.Ftp.ab" which it deleted.

After all this I wonder what good Norton 2006 is.  
I run Norton 2006, Spybot, spywareblaster, ad-aware, crap-cleaner and now BHODemon2 on your recommendation. I also use Registry First aid to clean up. Windows beta defender is also in the PC.

Is this all necessary? I ask because you don't mention spywareblaster in your first reply to my post.

What is your best suite of protection on a day to day basis?

Best regards and thanks for your help

Guy-- guyf

If you don't practice Safe Hex and on't maintain you computer with all Critical Updates,

Re: Trend Micro Housecall

HotFixes and security related updates then yes, they WIOLL all be needed.

If you learn to practice Safe Hex and keep yopur PC up-to-date the use for many anti malware applications is mitigated.
