Thanks, Steven

Actually, my problem is not solved by your advice but it guide to much to dig down in those subkey and change it value. Finally, I can open gpedit.msc again.

thank you so much

I've changed policy in user configuration as follow

- Restrict the user from entering author mode (Enable)
- Restrict users to the explicitly permitted list of snap-in (Enable)
- Group Policy Management (Disable)
- Group Policy Object Editor (Disable)

after reboot pc, I can not open gpedit.msc agian event log on as administrator.

How can I solve this problem

thank you in advance
